

Dear Editor:

This year's prize-winning **Olympus BioScapes** images and videos of life science subjects, along with additional press information, are now available for your use!

Olympus BioScapes is the world's foremost forum for honoring life science images and movies captured through light microscopes. The competition focuses on the fascinating stories behind the images - stories about the important work going on in laboratories around the world. We hope you enjoy perusing these outstanding images as much as we have.

All of these images are copyrighted, but we are delighted to be able to offer you the use of them for bona fide editorial purposes, once permission is given. Please contact us if you want to use the images; the permissions usually only take a quick email. In many cases, **we also have larger image files** available for your use. Any commercial (noneditorial) use must be approved by Olympus on a case-by-case basis in advance; please email us for approvals.

All images must be credited with at least the following information: the name of photographer, and the fact that the image was a winner in the 2009 Olympus BioScapes Digital Imaging Competition®. Additional caption information and thumbnails of each image are included in a separate document in the press section of the website.

If you'd like to see the images and movies at full screen size, please view them in the Winners' Gallery at www.olympusbioscapes.com.

Please let us know if you have any questions or would like to learn more about the images, photographers or the competition itself. We look forward to hearing from you.

Thank you!
